

Canadian Oil Sands Companies to Keep an Eye On

Description

Estimates come and go, but they are still worth acknowledging from an investment perspective. Measuring out until 2030, the Canadian Association of Petroleum Producers forecasts total Canadian oil production and breaks it out by geographic region and source type. This particular target was recently upgraded by 500,000 barrels per day (bbl/d) to 6.74 million bbl/day. For producers, this is great news.

As a group, oil sands producers look to produce 77% of the total 6.65 million bbl/d to come from western Canada. In the following video, Motley Fool analyst Taylor Muckerman walks through which two companies he believes could end up controlling this increased market share. Both are likely household names, but their individual growth goals hint at a strong decade ahead.

Another vast Canadian resource that could be on the verge of a major move higher is uranium – the key ingredient for nuclear power.
