

## VCN vs. XIC vs. ZCN: Which Index ETF Is the Better Buy for Canadian Investors?

### Description

Welcome to a series where I break down and compare some of the most popular [exchange-traded funds \(ETFs\)](#) available to Canadian investors!

Canadian investors taking a [passive approach](#) to buying domestic stocks generally default to the tried-and-true **S&P/TSX 60 Index**, but the market doesn't end there. Beyond the TSX 60, there are at least another few hundred small- and mid-cap Canadian stocks worth investing in.

**Vanguard**, **BlackRock**, and **BMO** provide a set of low-cost, high-liquidity, CAD-denominated ETFs for tracking the overall Canadian stock market. Buying any of these ETFs will allow you to make a broad bet on domestic stocks.

The three tickers up for consideration today are **iShares S&P/TSX Capped Composite Index ETF** ([TSX:XIC](#)), **Vanguard FTSE Canada All Cap Index ETF** ([TSX:VCN](#)), and **BMO S&P/TSX Capped Composite Index ETF** ([TSX:ZCN](#)).

Which one is the better option? Keep reading to find out.

### XIC vs. VCN vs. ZCN: Fees

The fee charged by an ETF is expressed as the management expense ratio (MER). This is the percentage that is deducted from the ETF's net asset value (NAV) over time and calculated on an annual basis. For example, an MER of 0.50% means that for every \$10,000 invested, the ETF charges a fee of \$50 annually.

XIC has an MER of 0.05% compared to VCN and ZCN at 0.06%. The difference here is literally \$1 on a \$10,000 portfolio, which is not worth fretting over. Still, if we had to pick a winner, it would be XIC by a tiny margin, but, honestly, 0.01% is not worth agonizing over.

## XIC vs. VCN vs. ZCN: Size

The size of an ETF is very important. Funds with small assets under management (AUM) may have poor liquidity, low trading volume, high bid-ask spreads, and more risk of being delisted due to lack of interest.

XIC currently has AUM of \$10.67 billion, VCN has AUM of \$5.064 billion, and ZCN has AUM of \$7.71 billion. Although all are highly liquid and more than sufficient for a buy-and-hold investor, XIC is clearly the more popular one at this time.

## XIC vs. VCN vs ZCN: Holdings

All three ETFs have nearly identical sector weights, with over 40% of underlying holdings in the financial and energy sectors, which is typical for the Canadian stock market.

XIC, VCN, and ZCN share the same top 10 holdings, with stocks like **Shopify, Royal Bank, Toronto-Dominion Bank, Enbridge, Bank of Nova Scotia, Canadian National Railway, and Brookfield Asset Management** dominating their indexes.

However, there are some differences in the indexes each ETF tracks. While VCN tracks the FTSE Canada All Cap Index, XIC and ZCN track the S&P/TSX Capped Composite Index. These indexes have slight differences that shouldn't affect performance too much but are still notable.

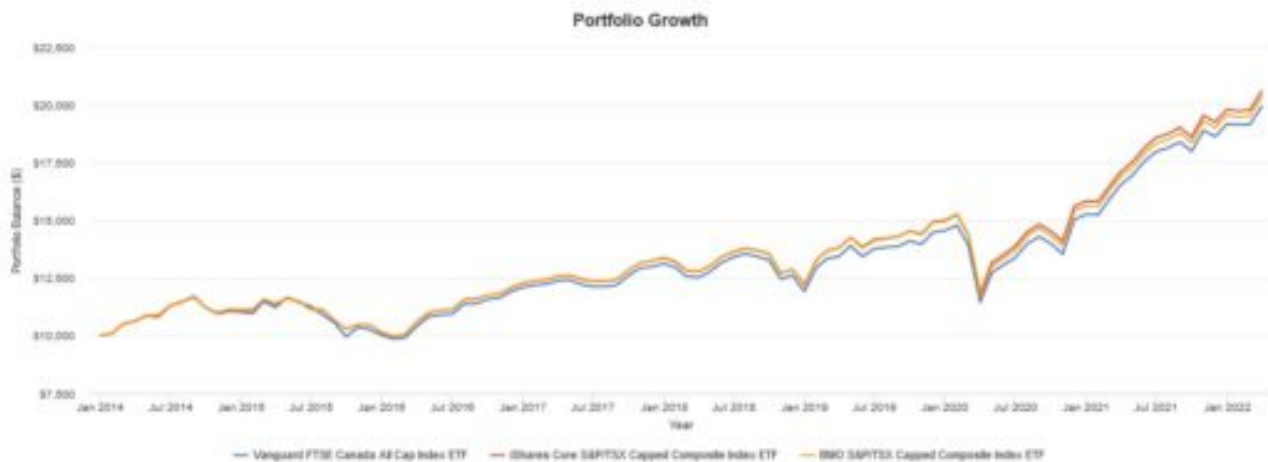

Firstly, XIC and ZCN puts caps on the weightings of each underlying stock. This is to prevent any individual stock from getting so large as to dominate the index. Secondly, XIC and ZCN has more holdings at 241 vs. 183 for VCN.

## XIC vs. VCN vs ZCN: Historical performance

A cautionary statement before we dive in: past performance is no guarantee of future results, which can and will vary. The portfolio returns presented below are hypothetical and backtested. The returns do not reflect trading costs, transaction fees, or taxes, which can cause drag.

Here are the trailing returns from 2014 to present:

Portfolio	Initial Balance	Final Balance	CAGR	Stdev	Best Year	Worst Year	Max. Dr
Vanguard FTSE Canada All Cap Index ETF	\$10,000	\$19,915	8.71%	12.38%	25.65%	-9.12%	-
iShares Core S&P/TSX Capped Composite Index ETF	\$10,000	\$20,574	9.14%	11.96%	25.95%	-8.71%	-
BMO S&P/TSX Capped Composite Index ETF	\$10,000	\$20,317	8.97%	12.20%	25.07%	-8.86%	-

Here are the annual returns from 2014 to present:

All three ETFs had virtually identical performance, with XIC having a very slight edge. I chalk this up to the fact that XIC held more stocks that may have outperformed in the last few years. Over time, this difference is likely to disappear.

## The Foolish takeaway

If I had to pick and choose one ETF to buy and hold, it would be XIC due to a very slightly lower MER, larger AUM, and higher number of holdings. However, if you're partial to Vanguard or BMO, either VCN or ZCN would be excellent choices as well.
